A Built-In Infrared & Radio Frequency Receiver supports your Screens On-wall or In-Ceiling application for a clean appearance.

Standard built-In Low Voltage Controller (LVC), a 12V trigger port can be connected to your projector Trigger point, this enables synchronization between the drop/rise cycle of your screen and the power cycle of the projector. You could extend this port using a standard RJ45 connector and CAT-5 cable to anywhere in the room. Or mount your Wall-switch like a regular light Switch.
